Software Engineer (Front End-Angular Developer)

Remote Work Position

Job Description

WISY is a high-tech startup based in both Silicon Valley and the City of Knowledge, Panama, that supports consumer packaged goods (CPG) industry and retailers to deeply transform their business by revolutionizing new ways to see retail. By using image recognition, powerful machine learning models and artificial intelligence, Wisy enables retail excellence based on real-time information and the power of data. Since its creation in 2017, Wisy established the goal of reaching Silicon Valley and in 2018, it operates from its headquarters in California where it has become a global company that serves companies on different continents.

We are looking for a talented Software Engineer with experience in mobile app and API development. We'll give priority to candidates with proven app development experience with real-world products.

Software Engineer Duties:

- Work on programming languages such as Typescript.
- Create Technical Requirements Documentation based on Product Requirement Documents.
- Develop high-level user interfaces using rapid prototyping methodologies.
- Design application frameworks to be used across multiple products.
- Collaborate with internal technical teams to identify and build platform elements required to support key mobile product features.
- Ensure consistency between the delivered product features and the requirements/criteria of the business.
- Build, implement, and manage product modules along with their sub-systems.
- Test products to remove bugs and any malfunctioning aspects.
- Carry out unit testing and integration analysis.
- Writing clean and maintainable code that can assist in scaling an application into the future. Document the entire usage process in detail for straightforward use and upgrade in the future.
- Participate in key internal meetings, including weekly status updates and planning sessions.
- Remote work with some face to face meetings for team events.

Preferred Qualifications:

- 2+ years of programming experience, as professionals or students. Preference will be given to candidates who have experience of web and mobile app platforms.
- Bachelor's degree in computer science, computer engineering or similar.
- Strong Math skills (e.g. statistics, algebra).
- Analytical and problem-solving skills and attention to details.
- Familiarity with RESTful APIs and Cloud Services.

- Experience with Firebase and Angular.
- Experience creating, optimizing, and integrating Application Programming Interface (API) calls; background in API development preferred.
- Experience working with Agile Project Management & Development methodology.
- Works well independently and has solid time management, prioritization, and organization skills.
- Fluency in English is required.
- Proficiency in Spanish is an advantage.

Base Pay Range

Commensurate with Experience

Additional compensation types

- Stock options
- Financial aid for home office expenses and Internet
- Travel expenses for on-site team gatherings

Contact

Please send the following information to talent@wisyy.ai:

1. CV
2. A short video intro in English answering the following questions to assess your verbal communication skills:
 - Question #1: Please describe the most difficult or challenging project you have had to face. Why was it difficult? How did you solve it and what have you learnt from it?
 - Question #2: Why do you want to work at Wisyy?

Important notes:

Please be concise in your responses, try to limit yourself to no longer than two (2) minutes per answer.

Don't worry about making a highly produced video; it is important for us to clearly see and hear you, but we're not expecting a Hollywood production :)

Be yourself!

You may submit your video (or videos if you decide to separate each question) via email by replying to this message with your attachment(s).
